DETAILED ACTION

Response to Amendment

1. This office action is in response to the amendment filed on 12/22/2004.

Claim Rejections - 35 USC § 112, First paragraph

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-11, 19 and 20 are rejected under 35 U.S.C. 112, first paragraph, as a single means claim.

Re claim 1, it is subject to an undue breadth rejection under 35 U.S.C. 112, first paragraph. See MPEP 2164.08(a).

Claims 2-11, 19 and 20 depend on claim 1 are similarly rejected.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(b) that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Harriman et al (U.S 5898687), hereinafter referred to as Harriman.

Re claims 1, 10-13, 17 and 18 Harriman discloses a switching fabric configured to replicate an address pointer that references the shared memory location of the multicast data element from ATM cells if the cell requires multicast replication and passes the header information to an appropriate one of a plurality of unicast output queues if the cell does not require multicast replication (*extract in-band information from a current packet or skip extraction of said in-band information and perform a look ahead operation to a determined location in a next packet, wherein said apparatus is configured to switch between said extraction of said in-band information and skipping said extraction*, column 2, lines 7-28).

Re claims 2 and 3, Harriman discloses a switching fabric configured to switch from generating one or more unicast queue addresses to generating one or more multicast queue addresses and to switch from generating one or more multicast queue addresses to generating one or more unicast queue addresses (column 5, lines 42-48).

Re claim 4, Harriman discloses a switching fabric comprising a pointer to address generator logic circuit (figure 1, element 128), a head pointer logic circuit (figure 1, element 130) and a multicast head pointer logic circuit (figure 1, element 200).

Re claims 5-7 and 14, Harriman discloses a head pointer logic circuit comprising a plurality of queues for storing and generating one or more unicast addresses (column 4, lines 26-31).

Re claims 8, 9, 15 and 16, Harriman discloses a multicast head pointer logic circuit comprising a plurality of queues for storing and generating one or more multicast addresses (column 4, lines 50-64).

Allowable Subject Matter

6. Claims 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement for reasons for allowance.

7. Claim 19 is allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or fairly suggest an apparatus wherein a predetermined location in a next packet is a predetermined distance from a start of packet of said next packet.

Claim 20 is allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or fairly suggest an apparatus wherein a predetermined location in a next packet comprises a port information location of said next packet.

Response to Arguments

8. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

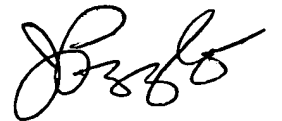

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
